

New bio-marker and anti-cancer agent discovered from human sera

Yasuhiro MIYAKE

Department of Gastroenterology and Hepatology,
Okayama University Hospital

Anti-60S Ribosomal protein L29 (RPL29) antibody

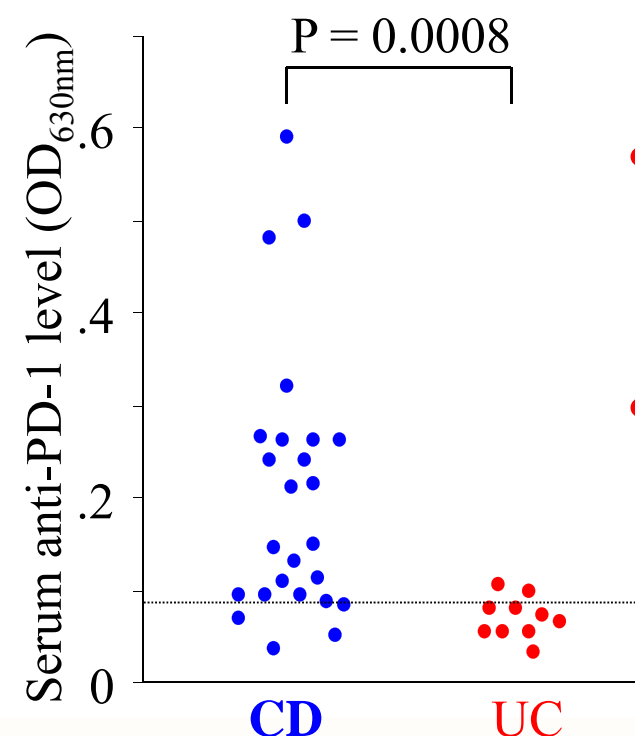

Anti-RPL29 reduces the proliferation of cancer cells.

Serum anti-RPL29 is associated with the prognosis of cancer patients.

➔ New anti-cancer agent and prognostic marker

Anti-Programmed cell death-1 (PD-1) antibody

New bio-marker for IBD

- Useful for the discrimination of Crohn's disease (CD) from Ulcerative colitis (UC).
- Reflect clinical features of CD.

Accelerating drug development based on the stratification of IBD patients.
