Okayama University Hospital is the clinical research based hospital as well as the place you can conduct your clinical trials with our medical professionals and staffs at our cutting edge facility. Investigator-initiated clinical trials are recommended. Center for Innovative Clinical Medicine of the hospital is the key facility to promote the clinical and translational research that is a core clinical research hospital in Mid-Western Region in Japan. We support an innovative drug development as well as to invent the science-proven based novel medical devices under the legal regulation of Japanese FDA. We also accept the early-stage research seeds that promise to develop a new medical products so called "Bio-venture Support Services" or "Supportive Services for Clinical Development" for various-stage seeds as well. Please feel free to ask us your inquiry or any.
